### DETAILED ACTION

- This action is responsive to the following communication: an Amendment filed on 2/27/06.

#### *Response to Arguments*

Applicant's arguments, see page 15, filed 2/27/06, with respect to claim 49 have been fully considered and are persuasive. The objection of claim 49 has been withdrawn.

Applicant's arguments, see pages 15-16, filed 2/27/06, with respect to 1 have been fully considered and are persuasive. The prior art rejection under 103(a) of claim 1 has been withdrawn.

#### *Allowable Subject Matter*

Claims 1, 5-14, 18-25, 27-31, 33-36, 38-42, 44-47, 49-50, 52-53, 55 are allowed; renumbered as claims 1-42.

The following is an examiner's statement of reasons for allowance: The cited prior arts (US 6113208 and US 6363402) of record teach an apparatus and a method for updating software program (i.e. printer driver), but the cited prior arts of record fail to teach and/or suggest "when the determining controller determines that there is no adaptability between and the new version of the first software program and the old version of the second software program, the updating controller updates the second software program and then updates the first software program, and when the determining controller determines that there is no adaptability between the new version of the second software program and the old version of the first software program, the updating controller updates the first software program and then updates the second software program *and in combinations of other features*" as cited in independent claims 1, 14, 25, 31, 36, 42, 47, 50, and 53 (renumbered as claims 1, 11, 19, 24, 28, 33, 37, 39, and 41 respectively). In other words, both US 6113208 and US 6363402 teach a method for updating only a single software program (i.e. first software program *or* second software program) rather than updating

Art Unit: 2625

both programs (i.e. first software program *and* second software program) as cited in independent claims stated above. The examiner found neither prior art cited in its entirety, nor based on the prior art, found any motivation to combine any of prior arts that teaches the above limitations and in combinations of other features cited in independent claims 1, 14, 25, 31, 36, 42, 47, 50, and 53 (renumbered as claims 1, 11, 19, 24, 28, 33, 37, 39, and 41 respectively).

### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Deborah Gladstein on 3/30/06.

The application has been amended as follows:

**Preamble of claims 36, 42, and 53:**

36. (Currently Amended) A computer readable medium storing a computer program product for managing a print system comprising a data processor connected to a network and a printer for executing a print job sent from the data processor via the network, the data processor having a first software program which is installed therein, and the printer having a second software program which is installed therein, the computer program product comprising:

42. (Currently Amended) A computer readable medium storing a computer program product for managing a print system comprising a data processor and a printer for executing a print job sent from the data processor, the data processor having a first software program installed therein, and the printer having a second software program installed therein, the computer program product comprising:

53. (Currently Amended) A computer readable medium storing a computer program product for managing a print system comprising a data processor connected to a network and a printer for executing a print job sent from the data processor via the network, the data processor having a first software program installed therein, and the printer having a second software program installed therein, the computer program product comprising:
